

Unique in the aftermarket!

Only available from febi!

**febi rear control arm including
rubber mountings and mounting kit
to fit Ford Focus and C-Max**

Replacing the rear control arms of the Ford Focus and C-Max is often a demanding task. Due to heavy corrosion, the connection between the rubber mounting and the fastening bolt can only be released by breaking the bolts.

The nuts, tightly connected to the control arm by the manufacturer, can also only be removed forcefully.

Nuts and bolts must therefore be replaced. However, these control arms are supplied by the manufacturer as complete units without the frequently required fastenings.

**No more time-consuming re-ordering of individual components:
With this febi repair kit, you get everything you need without delay!**

febi 30000 bottom rear control arm including rubber mountings and fastening kit
febi 30004 top rear control arm including rubber mountings and fastening kit

Of course, all components are also available individually from febi.

Ask your febi distributor about febi bilstein replacement parts!
