

Steering column switches by febi bilstein: Always a high-quality alternative

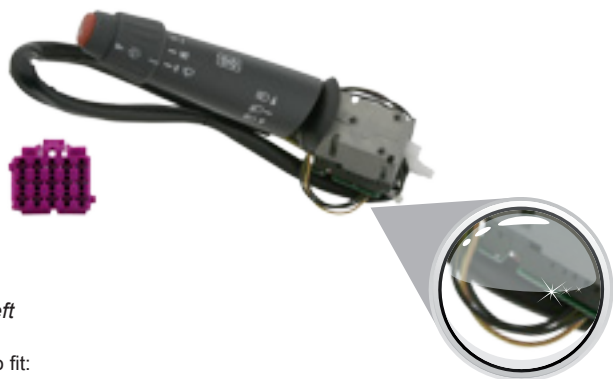

Quality is extremely important for steering column switches. Only high-quality materials and flawless processing of the mechanical and electronic components can guarantee reliable function and high durability.

In addition to outstanding quality, steering column switches by febi bilstein offer an additional advantage: the right cable colours (see enlarged image). This is important, because the vehicle manufacturer's circuit diagrams - which may be consulted in the event of a malfunction of the electrical system - are based on specific cable colours.

febi bilstein's extensive replacement parts programme relating to steering column switches covers a great range of vehicles by the "Big 7" commercial vehicle manufacturers.

With the two references febi 19698 and febi 46025, febi bilstein offers the matching steering column switch for the left and right side of a multitude of Mercedes Benz commercial vehicle models:
