New flywheel packaging

>> PROBLEM:

In the past complaints occurred in some cases when shipping commercial vehicles flywheels. For example, the starter ring gear was damaged or the flywheel was broken (Fig. 3).

>> CAUSE:

If heavy flywheels fall on hard ground during transportation or storage, the packaging was not robust enough to absorb the impact.

>> SOLUTION:

Now febi bilstein deliver all commercial vehicle flywheels in a new, improved protective box (Fig. 1), which are lined with chipboard and have recessed handles for safe transport (Fig. 2).

If the flywheel is dropped, the impact is absorbed by the particle board in the packaging (Fig. 4). So the wood inserts are damaged at worst, not the flywheel!
