

## Switch units for door control

In modern vehicles, electrical components are now part of the standard equipment. However, the more electrical equipment is installed, the more vulnerable the vehicle is for any faults and defects.

The electrical system in the vehicle door, e.g. power windows, door locks, mirror adjustment and the mirror heating are centrally controlled by a switch unit. One reason for switch unit failure is wear and tear as equipment ages. But even an open window in the rain can cause premature failure because the rainwater can destroy the electronics inside.

febi bilstein offers the following switch units for MAN trucks:

<p><b>febi no. 47018</b></p>  <p>to fit: MAN TGL / TGM, TGS / TGX OE No. 81.25806.7107</p>	<p><b>febi no. 47019</b></p>  <p>to fit: MAN TGA, TGS / TGX OE No. 81.25806.7109</p>	<p><b>febi no. 47020</b></p>  <p>to fit: MAN TGA, TGL / TGM, TGS / TGX OE No. 81.25806.7112</p>
---	---	--

**Attention!**

It is necessary to adjust the control unit when replacing the switch unit. The identification number of the new component should be entered in the control unit. Although the switch unit works without the adjustment, complications can occur later due to incorrect data in the control unit.
